"Intestinal Resorption in Paralytic Ileus."

Budapest, A Magyar Tudományos Akadémia V. Orvosi Tudományok Osztályának Közleményei, Vol XVII, No 2-3, 1966, pages 259-275.

Abstract: [Authors' Hungarian summary modified] In 39 patients, a total of 64 studies were conducted on protein (^{131}I -albumin), fat (^{131}I -triolein) and carbohydrate (dextrose) resorption, and the data obtained in acute abdominal disorders or in the days following abdominal surgery were evaluated mathematically. It was found that resorption of the macronutrients is significantly decreased in paralysis of the gastrointestinal system. The decrease is proportional to the degree and duration of the paralytic ileus. Attempts to demonstrate a decisive role played in these cases by the lack of pancreatic enzyme activity, decreased intestinal motility, intestinal distension, vagotomy, the type of operation performed, the time interval since the operation or prolonged hypotension were unsuccessful. Disturbances in intestinal resorption appear more frequently following more extensive trauma although they have been noted following lesser interventions as well.

Juice purification at high temperature with reduced doses of lime.
A. M. Czirfusz. Comments on M. Gairdner's article. L. Macoska
(*Ernährungswiss.* 1961, 8, 200-202, 203-204, 5th Ed. Abstr.,
1961, 12, 118).—(a) Laboratory tests are reported from which
it is claimed that juice limed with 0.2-0.4% of CaO and heated to
100° gives good purification with improved filtration.

(b) The above results are criticized as inconclusive and insuffi-
cient; laboratory data are not necessarily applicable in the factory,
especially in regard to filtration problems. P. S. Auer.

Title : The Application of Hydraulic Cyclone Separators in the
Sugar Industry.

Orig Pub : Cukoripar, 2, No 7, 147-152, 1957.

Abstract : The application of hydraulic cyclone separators to the
removal of the calcium hydroxide from the juice follow-
ing the second carbonation and to the treatment of the
waste waters of sugar refineries is described.

Warsaw-Krakow, Przegląd Lekarski, Vol 19, Ser II, No 5, 22 May 63, pp 245-247

Abstract: [Authors' English summary modified] Authors note that cases of pulmonary neoplasm are erroneously diagnosed as tuberculosis with increasing frequency. They cite three examples of cases in which the radiological picture of the primary cancer of bronchial origin resembled that of a pulmonary cyst and discuss the difficulties of correct diagnosis. They call attention to the interesting fact that in all cases the changes occurred in the region of the sixth segment, and suggest that findings at this site be checked with particular care and that suspected neoplastic cases be directed for early surgery. There are no references.

"Post-war Progress in New Forms of Drugs."

Warsaw, Pharmacja Polska, Vol 19, No 2, 10 May 53, pp 173-182.

Abstract: Review article on new forms of medication developed since the war, with an introduction and the following headings: Tablets, Coated tablets, Two-stage tablets, Spansulao--microdrageettes, Parenterally administered drugs, Ointments with new bases and rectal forms, Therapeutic creams, Suppositories with new bases and new forms of rectal medications, Aerosols, Suspensions, Dry emulsions and suspensions, Hypospray jet injectors, and Placebos, with a brief note on their advantages and contribution of industrial pharmacy to their development. There are 55 references, of which about 10 each are Polish and German, and the others Western.

1. The first group of respondents (10%) was made up of people who had been in the country for less than 10 years. The second group (20%) had been in the country for 10 to 19 years. The third group (30%) had been in the country for 20 to 29 years. The fourth group (20%) had been in the country for 30 to 39 years. The fifth group (20%) had been in the country for 40 years or more.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

TITLE: Determination of the distribution coefficient of zinc with radioisotope Zn sup 65 by the zone melting of aluminum

SOURCE: Academia scientiarum hungaricae. Acta technica, v. 51, no. 1-2, 1965, 63-79

TOPIC TAGS: zinc, radioisotope, aluminum, metal zone melting, distribution coefficient, metal crystallization

ABSTRACT: The δ/D ratio (where δ represents the rate of crystallization front advance and D represents the diffusion coefficient) for zinc in aluminum was determined by zone melting according to the techniques described by GELLI, D., and ROREA, M., (Aluminum, Vol 30, 1961, p 3). Various refining velocities and melted zone lengths were employed in the tests. The activity of the zinc isotope was continuously monitored. The parameters for the optimum zone-melting process for 99.99% pure aluminum with zinc impurity were determined. The method would be suitable for other metallic impurities in aluminum also. Orig. art. has: 11 figures, 4 tables, and 3 formulas. [SPRS: 33,732]
